A feature has a reason behind it

What did the team need to get right when it chose this approach?

Start with a real product choice

> Buyer question
>
> Product choice

Name the work at stake

Illustrative example: an AI workflow flags uncertain cases for human review.

What must stay under human control?

> AI result
>
> Review step

Explain the trade-off

What other route was plausible, and why did the team choose this one?

Use the actual reason

Chosen route

Alternative

Make the choice assessable

Connect the decision to a buyer's task; support claims with evidence.

Explain the choice with evidence

01 What did we choose?

02 What work does it change?

03 What supports the explanation?
